

Prairie Farm Rehabilitation Act Calls For The Demonstration Of Methods To Control Soil Drifting

Five township or district areas were being selected in the prairie provinces as a large scale demonstration of soil drifting control and crop production in a community effort. Minister of Agriculture Robert W. Anderson is discussing progress in the government's department and soil drifting program. Work was being actively pushed ahead to make the study of these areas which might best represent large areas of similar drought conditions.

In areas where drought has had most disastrous consequences and where soil drifting has compelled farmers to leave their lands, the study, "special investigations will be conducted as to the best methods of reclaiming the soil, either for pasture purposes or for the type of agriculture in which strip farming, the use of legumes, grasses and drought resistant cereals, the use of crop crops and cultural methods will allow development of a program of agriculture which will guarantee endurance and reasonable security to the owner."

Most of the worst areas already had been inspected. One such area had been selected as being a base on which to start investigation work as to the best way and means of re-establishing grasses and cereals. Several more such areas will be operated.

An initial program was practically completed, he continued, for putting into effect water development projects provided for under the Prairie Farm Rehabilitation Act. A number of engineers experienced in this type of work would be appointed immediately "on prompt assistance may be given to those desiring to avail themselves under this act in the development of surface and ground water supplies." Small water projects were being given immediate special attention.

Although it would take another year in order to make available adequate supplies of trees yet all the resources of the Dominion forestry nursery stations were being made available for free planting in 1935. Farm home shelter belts were being demonstrated on all experimental areas as well as the use of windbreaks and reclamation area, Mr. Weir said.

Strange Street

Amazing Story Of Toronto Man Who "Gained Prominence In England "Strange Street", the autobiography of A. Beverley Barker, 44-year-old Toronto, who came to prominence as editor-in-chief of Lord Beaverbrook's Daily Express, was recently reviewed in London newspapers.

It relates the amazing story of the rise of the former assistant in a music shop in Toronto to a high post in Fleet street, a junior partner in the famous "Max and Eric" comedy band and finally to a position as a \$200,000 a year publicity executive for a British film corporation. "Strange Street" reveals Lord Beaverbrook's undying affection for Andrew Barker. The "New Brunswick boy" who made prime minister of Great Britain.

Likes Winter Best

Governor-General's Son Does Not Want To Leave Canada

Because he likes "the winter here best," Hon. George R. Lawrence "Strutts Puncy," the eldest son of the Governor-General and Lady Beuchamp, does not want to leave his native Canada.

His mother related the story at the Joas of Are Institute in Ottawa after she had told the younger they were leaving the Dominion.

A sharp reduction of 8 per cent in Canada in potato production in 1934 is indicated, according to official estimates. This reduction would bring the 1935 area in potatoes back to the 1933 level. The main reductions are in the provinces of Nova Scotia, New Brunswick, Prince Edward Island, Quebec and Ontario.

Beet is a common source of severe poisoning to women in some industries, having a tendency to destroy the white blood cells and resulting in dangerous anaemia.

It was estimated 143,000,000 pounds of dust fall annually on greater Montreal, according to officials at McGill University.

Significance Of Jubilee

Empire Honors King Because He Is Faithful To His Duty

Behind any voluntary outpouring of human sentiment, underlying the emotional manifestations in which the jubilee is given, there is a deep and some sound practical instinct giving the display significance. So it is that while to inquire into the fundamental meaning is to be sought in the great jubilee demonstrations for the King and Queen of Great Britain, the King is great in the eyes of the British government from having at its head one who represents the people as a whole, and not any particular party, class or policy, cannot be questioned. It is a strength which repels lack, and which has helped to bring dictators in those countries which have launched republics without first building strong traditions of government.

Paradoxically, the King is great in this measure as he can subordinate himself to the Crown. That symbol should be made to stand for, and to enlarge the personality of him who wears it temporarily. And it is primarily because King George has shown himself so fully aware of this duty of self-renunciation that his people do him such honor, as is shown in the jubilee demonstrations of their political machinery.

Italy's Book Hospital

Damage Done To Precious Volumes Will Be Repaired

Italy's new national hospital for books is to have its headquarters in the Abbey of Clugna Ferrata, near Rome.

All the resources of modern science, from chemical analysis to ultra violet rays, are being added to the experience of the abbey, which has been identified for centuries with the preservation of precious volumes.

The institute will have three departments. The first concerned with physics and biology, will diagnose the damage done by vegetable matter, insects, damp and fire. In the second department, books will be fumigated and subjected to a microscopic and chemical examination, while in the restoration department, the books will be restored as far as possible to their original form and clarity.

Patent—"How can I ever repay you for your kindness to me?" "Thank you," she replied, "or cash."

A cloud burst summer, comes six or more inches of rainfall and at the rate of 10 or more inches per hour.

What the world needs is peace pacts that pack perfect peace.

You Don't Necessarily Need An Expensive Camera

Superior service for persons convicted of driving motor cars who have intoxicated would be abolished under an amendment to the Criminal Code introduced in the House of Commons by Hon. Hugh Guthrie, minister of justice.

The change would make it impossible for magistrates to suspend sentence in these cases.

The code amendments include a number of clauses aimed at unfair practices in merchandising, based on the report of the price spreads commission.

Mr. Guthrie said there might be some doubt about the constitutionality of these clauses, which provide heavy penalties.

Law Of Wolf Pack

Husky Dogs Attack And Kill Anyone Who Falls

Dog drivers, veterans of the snowy trails, kept their heads after-huskies attack and kill anyone or child taken recommended for the three husky dogs that attacked and killed a six-year-old boy at The P.S. Man. To the members it meant confusion of the trail drivers' fear that huskies no matter how friendly, attack and kill man, woman or child who falls. It is the law of the wolf pack and in the maleness of the wolf the wolf strain preeminence.

Those who follow the northland trails believe the law must have fallen. To huskies, who often eat their own on the trail, that means "fair game."

It is estimated that about nine million hares annually are shot by young in the isolated refuge of the Pribilof Islands in Bering Sea.

Bank Of England Overstated

Surplus Clerks Choose Job In Preference To Bank

"The Old Lady in Threadneedle Street"—the Bank of England—is at present in much the situation of the "old lady" who lived in a shoe and had so many children she didn't know what to do. In the case of the bank, the "children" are surplus clerks who have refused financial inducements to leave their jobs and seek a livelihood elsewhere.

During the war years the Bank of England did not take on additional employees, but between 1919 and 1927 about 300 "temporary" clerks were engaged because of the vast amount of accumulated work, together with loss and conversion operations and the large increase in the bank's dealings with the continent of Europe.

The additional men were hired without examinations and without having served any banking apprenticeship. Now the work to be done has decreased, and various departments, housed elsewhere for several years while the bank building was being reconstructed, are returning to headquarters, with the result that fewer employees are required.

The bank authorities therefore have offered to the temporary employees a retirement gratuity ranging up to \$10,000 each, according to the position held and salary received, or the alternative of a life pension with a maximum of 10 weekly, only a few men have accepted the first proposal, and thus far only seventy-five have agreed to retire on a pension.

Since acceptance of either offer is optional, the bank is retaining those who wish to keep their jobs, though they have little or no chance of advancement. However, since many of them are married men of thirty to thirty-five years, they prefer the certainty of their present places, together with the automatic pension they will have upon reaching the age limit, to an uncertain prospect of a new job, even with the financial inducement offered.

Palatial Subway Station

Monroe's handsome new subway was opened to the public with much publicity heralding the line as the finest in the world. The subway stations are the palaces, with checkerboard paving, marble columns and pink marble walls. Seven miles of the line have been completed. Work starts immediately on an additional twelve miles.

What the world needs is peace pacts that pack perfect peace.

Russian Scientists Planning To Break Record In Exploring The Depths Of The Ocean

Potatoes As Stock Feed

True Value Is Not Fully Recognized In Canada

When the true value of potatoes as feed for livestock and poultry is realized, much larger quantities than at present employed will be used. With high prices for stock and poultry feeds and a surplus of potatoes in Eastern Canada, stock raisers near the plentiful supplies of potatoes have a good opportunity to reduce their feed bills by feeding potatoes. Other countries make much use of potatoes as stock-feed. In Germany, for instance, only 20 per cent of the total potato crop is used for stock purposes, and approximately 40 per cent, for stock feeding. On the other hand, in Canada 64.6 per cent of the crop finds its way into the table and only about 31 per cent, for stock feeding. Stock raisers, says the Agricultural Situation and Outlook, recently issued by the Dominion Department of Agriculture and the Department of Trade and Commerce, would be well advised to inform themselves on the proper methods to ensure the best results. In brief, potatoes are as good for stock purposes as any other forage crop. They may be used, therefore, as a substitute for barley and corn, as in the ration of pigs, in which it is important to bear in mind that four pounds of potatoes are equal to one pound of cereal meal.

For Better Relations

Urges Reciprocal Visits To Be Applied To North America

Establishment of closer and better relations between United States and Canada was advocated by Harold F. MacNider, former minister to Canada, and former national commander of the American Legion. The people of Canada, MacNider told members of the Minneapolis Junior Association of Commerce, in Minneapolis, at their annual dinner, are ready to meet any advances that are made despite the fact, that although unintentionally, they have been hurt badly in the past. MacNider made it plain that he was not making a political speech but he said he felt a reciprocal tariff to some extent at least might be applied to North America.

As an example of past developments MacNider pointed to Canada, which consequently damaged a market for products of the United States. He said the tariff aimed against Mexico and the effect of ruining the cattle business in western Canada.

Future Plane Examined

Advisory Committee For Aeronautics Explain Details Of Year's Work

The details of the aeroplane of 1940 have been examined at Langley Field, Va., by 250 aircraft engineers, designers and government members of the national advisory committee for aeronautics explained in detail the results of their working during the past year in boundary layer control, the lifting development of more efficient propellers, jet engines, and the decreasing of noise.

The new popular price monopolies of the bureau of air commerce was examined by the large-scale wind tunnel, marking its first appearance. The machine has a small propeller and a large propeller. The pilot would be prevented from turning, and dual vertical and horizontal control fins.

Amend Criminal Code

May Abolish Suspended Sentences For Alcoholics Driving Cars While Intoxicated

Superior service for persons convicted of driving motor cars who have intoxicated would be abolished under an amendment to the Criminal Code introduced in the House of Commons by Hon. Hugh Guthrie, minister of justice.

The change would make it impossible for magistrates to suspend sentence in these cases.

The code amendments include a number of clauses aimed at unfair practices in merchandising, based on the report of the price spreads commission.

This year marks the highest point reached in Soviet science and exploration in the 17 years of the country's existence.

A new type bathysphere was under construction in a Leningrad scientific laboratory with which the Soviets hope to break the depth record set up by Dr. William Beebe. This will be the first time that the Soviet has attempted to explore the depths of the ocean, but their success in the stratosphere has made them seek new fields.

In the Soviet campaign of "Conquer the Arctic for the Soviet" 778 ships will sail the Arctic waters this summer, establishing regular routes, prospecting for natural wealth, and filling in the white, unexplored regions on the map.

The accompanying chart shows how the price of gasoline to the retailer has decreased and the gasoline tax has increased since 1924. The data for this graph are based on figures published by the Dominion Bureau of Statistics.

FALLING PRICES—RISING TAXES

In 1924 the average price to the retailer of all gasoline sold in Canada was 26.6 cents per Imperial gallon. Since 1924 the price has fallen almost continuously and for 1933 and 1934 it stood at 18.8 cents—nearly eight cents less than in 1924.

"But", you say, "gasoline does not cost me eight cents less a gallon than ten years ago."

You are right, and this is why:

In 1924 the gasoline tax was new in Canada and the total gasoline tax collected in that year amounted to

an average of only a little more than 1/4 of one cent for each gallon consumed. But as the price of gasoline fell the tax on gasoline rose to higher and higher levels until in 1933 it amounted to nearly 5 1/2 cents for each gallon consumed in Canada.

When you buy a gallon of Imperial gasoline you also pay other taxes totalling about 8/10 of one cent. The profit which Imperial Oil earned on each gallon of gasoline that it made and sold during 1934 was just over 5/10 of one cent per Imperial gallon.

IMPERIAL OIL LIMITED

NEW AGRICULTURALIST HAS BEEN APPOINTED

Achie A. Campu'll, formerly of the C. P. R. Irrigation Branch has been appointed agricultural agent for the Provincial Department of Agriculture at Lethbridge, replacing M. L. Fretz, who was transferred to Brooks district some weeks ago.

Come with the crowd to Red-cliff Stampede on July 1st.

SAVE

WE'VE heard a lot of that word "save" in the past few years. For some time now the question of saving our pennies and dimes has not only been important—but imperative.

Also, it may be noted that everyone who is in the business of selling merchandise to the public has devoted his attention to pointing out how much you, the customer, can SAVE by dealing with him, to the exclusion of others, which is perfectly all right, too, in the way, except that it is advisable for a customer in his own interest to be sure that the savings that he is getting are real and not simply over-optimism on the advertiser's part. In other words to save where it's SAFE to save—to save, for instance at EATON'S, where value means not simply cheapness—but quality at a price—and where every claim regarding merchandise is backed by an iron-clad guarantee of satisfaction that makes every purchase doubly safe. It's natural to want to save—but it's wise to remember that "IT'S SAFE to save at EATON'S."

EATON'S

FOR Economy USE ALABASTINE

THE NEWEST SENSATION! CARS GREASED

Under Actual Road Conditions
Increase the Life of Your Car—Decrease Repair Bills
SWAY SQUEAKS AWAY WITH MOTO-SWAY

Lubrication Under Actual Driving Conditions
This Amazing New Service is Invaluable to Every Grease Job
Drive in — See it Work

WE raise the body completely off the chassis with motor jacks, which jacks contact the frame at the center.
WE pull the spring leaves back into their natural curve—we call it "Temporary Re-arching."
WE put the proper lubricants where the ACTUAL WEAR takes place—the highest points of friction.
WE Do thorough lubrication, which means more than pumping grease through high pressure guns INTO OPEN CAVITIES.
WE Permit 100% lubrication, apply grease while the car is in motion and while the weight of the body is on the motor sway.
WE Locate that Hidden Body Squawk; we detect. Inspected parts.
WE Spread spring leaves to actually put lubricants between the leaves—not just smear on the outside.
WE Free frozen shackles without the aid of a "Crow Bar." The use of a "Crow Bar" is DANGEROUS.
WE Examine and retighten shock absorbers which can only be done with MOTO-SWAY. (Optional at slight additional cost.)
WE Lubricate "Knee-Action" cars. Now it's worth, it's perfect while the parts are all in motion—"Bouncing along."
WE Lubricate the "Bad-rod Springs." How else can you do it? Only with MOTO-SWAY.
WE Change Your Oil in the Chassis with Moto-Sway; all old oil and sediment come out, thus keeping repair bill away.
WE Make old cars ride like new ones, keep new ones riding like NEW—We prove it.
WE Challenge any other means of lubrication; the old stationary method has become obsolete. The MOTO-SWAY method is the only Correct way to Lubricate Your Car.

We are giving you this Guarantee and certified Moto-Sway Greasing and Lubricating Service at NO EXTRA COST
BENY'S GARAGE, Medicine Hat

Watching The Weather

Great Strides Have Been Made in Long Range Forecasting

Most of us look upon the weather bureau as a service which merely tosses daily forecasts such as "Fair to-day and Thursday, and give little thought to it except when a forecast goes wrong. Few realize the intricacies of weather-forecasting or the range from which information must be gathered to arrive at the daily "probab." Undoubtedly it is the evil that men do that lives after them and we have sight of the fact that the forecaster who tells us it will be rainy and cools when it turns out to be dry and hotter, is the same fellow who warns us of impending sharp changes in weather and enables us to take necessary precautions.

But it is not from the forecasting standpoint that we wish to approach the meteorological service contribution. Few realize that the whole science of meteorology is a close study of these same men who tell us the daily weather news. The origin of our weather "highs" and "lows", their movement from west to east, the general path of the weather in the continent, the probabilities of changes in these paths from day to day, and season to season, the depth or elevation of barometric readings in these highs and lows and what it may mean, the probability of rain or snow, or wind, extension of the science of weather forecasting, cycles, sun spots—in fact, all these and more are subject to close scrutiny of the meteorologist.

It is in the field of causes of rain, main air movements, and as a source of information for aviation, forecasting, that the most work is being done today. Great strides are being made in these directions. Long range weather forecasting is being attacked as never before. Who can say but that one of these days science will solve some of these perplexing questions? Extension of assistance to work of this nature would be most valuable. More support to the work is required not only from the agricultural production viewpoint, but also from the industrial world which stands to profit as well.—From the Farmers' Forum in Winnipeg Free Press.

Advance in B.C. Industries

Manufacturing Employees About 17 Per Cent. of Population

A steady advance in British Columbia manufacturing is shown in a historical survey which records commencement of plant operations in 1860 for the manufacture of lumber.

By 1880 some 400 plants produced materials valued at \$200,000,000. The output jumped to \$25,447,000 in value by 1910 from 392 plants due to population increase creating the growth of secondary subsidiary industries.

Ten years later, 1330 plants produced goods valued at \$220,000,000. Now Westminister is next in importance to Vancouver as a manufacturing city, with a population of 100,000. It is estimated that about 17 per cent. of the population are directly employed in the manufacturing industry.

Millions For Phone Cables

Belials To Have World's Finest Long Distance Service

A gigantic program of underground cable-laying, involving the expenditure of \$30,000,000, will give British telephone subscribers the finest long distance telephone service in the world.

The program has been made necessary by a tremendous increase in the number of long distance calls being made during the past few years. A million more calls originated in the London area during 1914 than in 1910.

The most important of the new trunk lines is the London-Liverpool cable, which alone is costing \$2,000,000. It is to be one of the most efficient cables in the world and will provide 360 new voice channels.

Regarded As Necessary

Wireless sets—the vehicles of so much Nazi propaganda—may no longer be pawned in Prussia, for according to an official announcement, they are now regarded as household necessities. It has been said in the courts that wireless sets are as indispensable in the home as a frying-pan.

Researcher

"What is the professor's research work?"
"Professor's Researcher—'It consists principally of hunting for his spectacles.'"

BOY SCOUTS GIVE KING HEARTY WELCOME AT RALLY

This picture, taken in the grounds of Windsor Castle, shows His Majesty the King, accompanied by the Queen and several members of the Royal Family, acknowledging the cheers of Scouts as they march past Their Majesties. One thousand Scouts, picked from all parts of the British Isles took part in a National Scout Service in St. George's Chapel, Windsor, shortly before this picture was taken.

Soil Drifting

Methods Of Control Outlined In Government Bulletin

A new bulletin on Soil Drifting has been prepared by the Experimental Farms Branch, Dominion Department of Agriculture. Owing to the importance of this subject the information contained in this bulletin should be of great value throughout the Prairie Provinces at this time.

While no one living in the open prairie areas of the Prairie Provinces is looking forward to a repetition of the severe soil drifting such as occurred last year, recent experience has indicated that present conditions have not changed materially. The surface soil entered the winter in a relatively dry condition and drifting on localised areas has already occurred.

The occurrence of soil drifting in Western Canada almost coincides with the time at which the land was first placed under cultivation. During the intervening period various methods of control have been suggested and tested, but the greatest progress in this direction has been made during the last fifteen years.

Methods for the control of drifting, the causes of soil drifting, the areas involved, control methods and precautions to be observed for best results, are carefully reviewed in the bulletin. Cover crops and systems of strip farming are also described in detail, with suggestions for suitable widths of strips. Where soil drifting is of infrequent occurrence several emergency measures are presented. These are control measures which can be applied on short notice.

Copied from the Bulletin No. 179, entitled "Soil Drifting Control in the Prairie Provinces" may be secured free of charge by writing to the Publicity and Extension Branch, Department of Agriculture, Ottawa.

Discovered Forty Years Ago

Process For Making Artificial Silk Found By Accident

Charles Frederick Cross (19), F.R.S., the man who gave woman artificial silk stockings, has died at his home at Here, Sussex.

The late Lord Melbourn once declared: "If it had not been for two English chemists, young women would not have had the wonderful stockings they wear to-day."

One of the two chemists was Mr. Cross; the other, H. Bevan, died in 1903.

Mr. Cross had no idea of the boon to be conferred on women when he and his colleague invented the cellulose process for spinning artificial silk over 40 years ago.

The discovery was made while the two men were experimenting with bits of wood. A solution was found, which was poured into a container with a hole in the bottom and a cycle pump was used to pull it out through the hole like a thread of cotton.

A company was formed to develop the spinning of artificial silk. In 1910 Mr. Cross was awarded the medal of the Society of Chemical Industry for "conspicuous service to chemical industry."—London Daily Sketch.

Variety In Bananas

London's slums show display much tawdry banquets and many banners welcome the King and the Queen on their jubilee drives. One banner bears this strange device: "Danna capitulation to the King and the Queen." Another provides London's last laugh: "Loney bet loyal!" 2181

Englishmen Love Horses

Riding School Almost An Common-place As Motor Garage

In 10 years there has been a decrease of 67 per cent. in the number of horses drawing trade vehicles in the United Kingdom, while horses for agricultural purposes have decreased by 10 per cent, according to the Army Council's census. The total number of horses in the country has fallen by more than 600,000 to the decade.

"This does not mean that in this country the horse is doomed to early extinction," says the London News-Chronicle. "The chief decrease is in draught animals, which are giving way everywhere to the motor-car. But there is no falling off in riding horses and hunters over 15 hands, and the number of thoroughbreds has actually increased. In a mechanized age little room remains for draught horses."

"But the Englishman's traditional love of the horse triumphs over the machine. More people are riding horses than ever before. The riding school is becoming almost as much of a commonplace as the motor garage. We may come to put horses between shafts. There is no reason why we should ever surrender the 'joy of the saddle.'"

Are Becoming Civilized

Natives On Pacific Islands Have To Pay Taxes

No cannibals are left in the Pacific Islands, but taxes have invaded the once uncivilized part of the world. This was the report of the Bishop of Malakania, the Right Rev. W. H. Baskerville, whose headquarters are in the Solomon Islands, on his recent visit to Brisbane, Queensland. "The natives," he said, "are taxed, the taxes ranging from \$5 to \$25.00 a head a year, or even \$125 where the natives are not so productive and skimming capacity is restricted, but I think that this, far from being bad for the natives, is a good thing in its way. It makes them do work of some kind, and this takes the place of the energy they wasted in wars in times gone by."

Baskerville's fish production in 1914 was \$210,772, an increase of 18 per cent. over 1913.

The right headlights of all motor cars in Argentina are green.

Make Good Architects

Women Who Have Taken Up Business Are Successful

Women's lives are much more closely bound up with houses than men's. Why, then, do so few women go in for the profession of architect? This question is asked by the London News-Chronicle. Only 15 are women out of 102 exhibitors at the show of photographs and models of work executed during the past three years by young architects trained by the Architectural Association, England. Those in authority say women lack the physical stamina to stay the course—only one woman to six men graduate each year. The woman who does succeed excels work indistinguishable from a man's. Miss Elizabeth Scott, who in competition with men, secured the designing of the Shakespeare Memorial Theatre at Stratford-on-Avon, sends designs for a conference hall, the Marie Curie Hospital, and two country houses. Remarkable success in the field of speculative building has been achieved by Miss Frances Barker, a girl architect, who graduated from the school only three years ago. Miss Barker recently won competition for a design of a small villa on the Sunningdale Estate, Mill Hill, the first competition of the kind to be won by a woman.

Describes Whole World

Nations Defend Themselves For Same Reason Children Do

One of those child specialists, he also takes over the radio, Anglo-Patri, says truly enough "Children in the first fighting stage are often collected up to defend themselves. They must show readiness to do it if necessary. Many times the mere show of readiness is enough. Should one of them retreat or show fear in the face of a challenge, he at once becomes the object of all the bullies in the neighborhood, and life is made miserable. But there isn't much change in conditions when children grow up. Always the strongest have survived because of the human tendency of the strong to crush the weak. Moreover, world politics today show this paragraph quoted to be a description of the whole world. Substitute 'nation' for 'child' and you have the reason for national defense. For a nation is only a crowd, made up of human units, grown-up children.—Brandon Sun.

FANCFUL FABLES

Old Burial Cave Found

Discovery At Mizpah Explains Story Of Abraham's Purchase

Discovery of a large burial cave to the south of the city of Mizpah, making plain the customs described in the burial of Sarah by Abraham as told in the Old Testament, is announced by Professor William F. Budge, director of the Penn and-Nab-Bed Expedition of the Pacific School of Religion.

"The very important materials from this cave are now being studied," said Professor Budge.

From the taddy crushed and disturbed skeleton remains, and the bronze and iron ornaments worn by the Hittite age people, the archaeologist has learned that at least sixty persons were buried in this cave during the early Iron Age, between 1200 and 800 B.C. The sixty or more burials indicate a long family history. It is explained, and illustrates the purchase of Abraham's purchase of the cave of Machpelah in which to bury his wife Sarah. Certain caves were common, and the archaeological excavations have discovered a cave long used as a burial place, such as the one now found at Mizpah.

The cave at Mizpah is revealed as a burying ground used even by the people of Canaan in the early Bronze Age, before 2000 B.C. before they were expelled by invading Israelites who became masters of the land. Pottery mingled with human bones is attributed to these Hittites. The Israelites had cleared out the old burials, depositing the bones near the cave entrance.

According To Science

Real Bed Should Sleep Bed Must Be Just Right

If you arise in the morning feeling as tired as when you retired the night before, it may be because you have not heeded the advice of the coffee, yeast, soap and toothpaste maid, but the chance are it is because of your mattress and springs. They may be too hard or too soft, or they may be out of balance.

An American psychologist contends, after due laboratory research, that the bed must be just right if one is to sleep just right. A bed too soft is as rest-killing as one too hard, and blankets too narrow or too wide tend to disturb sleep. Grandmothers—or great-grandmothers—obtained greater bed was the perfect sleep producer, in his estimation. It provided just enough protection from the rope springs and weighed its warm folds around the sleeper. He has no such kind words for the straw and cork mattress of a century-year-in-the-United States.

Perhaps he utters these views for the benefit of some mattress maker, upholsterer, furniture dealer, feather plucker, or blanket manufacturer. In any event they are good sleep aids. But why such fuss and feathers about sleeping? Why inventories of sleepers already known? He could put his psychology to more useful use, if he would tell us how to muster up the will-power or courage to get out of a cold bed in the middle of a winter's night for more covers, or even how to arise gladly at sunrise on a summer morning.

Ran Into Difficulties

Gap Student Made Mistake In Effort To Be Polite

At a social affair in Washington a young Japanese student was conversing with a girl, who happened to refer to the supposed fact that Japanese women bound their feet. The Japanese felt it incumbent upon him to correct the false impression, and said: "Japanese women do not bind their feet. That used to be the custom of our neighbors the Chinese. The Japanese women let their feet grow to their full size." Then, suddenly the Japanese student's pleasure at defending his countrywoman was lessened by the fear that he might have been rude to the young woman with whom he had been speaking. With a profound bow and in the most polite tones imaginable, he added: "As I was saying, our women allow their feet to grow to their full size, but believe me, dear madam, they could never, never even remotely hope to rival yours."

Advantages Of Keeping Bees

Busy Insect Lends Aid In Producing Better Crops

Bees are kept primarily for the honey and wax which they produce, and when it is remembered that the normal honey crop of Canada is approximately thirty million pounds a year and that the annual production of wax is close to one hundred and fifty tons, that alone seems to be sufficient reason for following them to keep a bee. The advantages of keeping a bee, however, cannot be fairly measured by the amount of honey and wax they produce, nor does the beekeeper himself reap the full reward of their labors. Fruit-growers, vegetable gardeners and seed producers also share in the benefits of beekeeping in that their crops of fruit, vegetables and seeds are greatly increased because of the bees' activities. Before a plant can produce fruit or seed, it must be fertilized by its own pollen or that from some other flower of the same plant, or in most cases from some other plant altogether. While there are some varieties of plants that will produce fruit or seed without being fertilized by their own pollen, it is a recognized fact that all would be increased from cross-fertilization. Experimental work carried out by the Bee and Horticultural Divisions at the Central Experimental Farm, Ottawa, has shown that apple and plum trees treated at blossoming time so that bees could not visit the flowers set little or no fruit while untreated trees of the same variety dropped a commercial crop. In the case of black currants a crop was set without the aid of bees, but larger crops were produced on those bushes to which bees had access. Wind and bees are the chief agents in the dissemination of pollen, and the latter, however, but the bees are by far the most important, because they depend on the pollen for their food. As they fly from one to the other in search of nectar they distribute the life-giving pollen as nature requires. This reason has become a common practice for growers to buy or rent colonies of bees for pollinating purposes alone.

Knocked Pitch Down

Countable Mistakes His Royal Highness P. A. "Fresh Young Bank Clerk"

The following item is taken from the files of an Ontario newspaper some of May 15, 1914.

A story is told of King George's trip to Canada when he was Prince of Wales, and he was on his way from Port Hope to Peterboro. At a certain point the line ended and the train had to be taken to another landing, where the train was again boarded for Peterboro. At the time the train was being taken to another landing, where the train was again boarded for Peterboro. At the time the train was being taken to another landing, where the train was again boarded for Peterboro.

His Royal Highness was accompanied by several officers and prominent Port Hope citizens, including Major Pollock, the architect of the town who was decked out in a gorgeous uniform. The prince was plainly startled in a North York summer suit. When he alighted from the train he ran for the taxi. The town constable was there with a pig hat, and after a very official bow to the crowd laid. When he saw the prince running to the back he ran out and threw him down.

"I'll teach you young whippersnaps to be running about when the prince is here," the constable shouted.

The prince did not seem to be running about when the prince is here, but he was brushed off his clothes. Major Bolton and a number of others hurried forward and pulled the constable away. When the villagers learned the identity of the youth they were going to mob the constable.

"I thought it was one of those fresh young bank clerks from Port Hope, and the constable as a defense. The prince offered him a sovereign with the comment that he hoped he would always be as ready to protect him.

Demand For Prophets

The present is both a good time and an evil one for prophets. Good, because there is a large bandwagon of public hunger for prophecy than ever before, bad, because events state not so that the prophets of falsifying prediction, but of uttering lies.—Baltimore Sun.

It is odd but there's always something better than you've got.

Sixteen operations are necessary in making the ordinary sewing needle.
